SafeLogic Joins Alliance for Digital Innovation

WASHINGTON (April 28, 2020) – The Alliance for Digital Innovation (ADI), the leading voice for commercial innovation in the public sector, welcomes SafeLogic to its growing membership.

ADI focuses on empowering federal agencies to more effectively purchase and use innovative commercial technology to provide modern, secure and effective digital experiences to improve the lives of the American people. SafeLogic’s decision to join ADI adds a leader in encryption and FIPS 140-2 validations for cloud, internet of things, and mobile environments to ADI’s coalition of commercial technology companies.

“We are thrilled that SafeLogic is adding their vision and experience with encryption and innovative security compliance to our team,” said Matthew T. Cornelius, ADI’s executive director. “The need to improve data security across all manners of network environments and across scores of devices is critical to true IT modernization. SafeLogic is a first class organization that allows federal agencies and commercial innovators to deliver secure and effective digital services to their customers.”

ADI employs deep policy analysis, collaborative engagement with federal leaders, and strong advocacy on behalf of innovative commercial companies to drive technology transformation in government and enable agencies to provide better services to the country via modern, secure digital capabilities.

“We are extremely happy to join ADI,” said SafeLogic CEO Ray Potter. “Our company mission to simplify and streamline the FIPS 140 validation process for cryptographic modules fits seamlessly with the coalition’s efforts to advance the adoption of commercial tech solutions. Faster compliance helps accelerate procurement, getting the best and most recent innovations directly into the hands of critical workers in the public sector.”

###

About the Alliance for Digital Innovation:

The Alliance for Digital Innovation (ADI) serves as a unified voice for commercial innovators with a mission of ensuring the public sector benefits from existing and emerging commercial technologies. ADI engages with government thought leaders to share emerging commercial technologies and to advocate for the removal of institutional and bureaucratic barriers to the operation of a modern digital government.
